

Incident Report - INC-4009

Type: Pothole

Location: Zone C

Date: 2025-05-28

Severity: High

Description:

On 2025-05-28, a large pothole was reported on a key arterial road in Zone C, causing traffic delays and safety concerns. The pothole, approximately 3 feet wide, appears to have formed due to prolonged water seepage and heavy vehicle movement. Commuters and local businesses flagged the issue repeatedly via the mobile incident reporting app.

Action Taken:

The Roads and Transport team cordoned off the area and began repair work within 12 hours. The damaged section was excavated, re-compacted, and resurfaced using bituminous material. A temporary detour was arranged until the road was reopened. A city-wide pothole survey is now underway.
